### **DETAILED ACTION**

This office action in response to application filled on 6/3/2005.

#### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 15-21, drawn to a method of manufacturing a microstructure, classified in class 438, subclass 48+.
- II. Claims 1- 14, drawn to an apparatus or microstructure classified in class 250, subclass 1+.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In the instant case, the apparatus as claimed can be used to practice another and materially different process, such as a process which does not require that the semiconductor material thereon be transformed to be a non-semiconductor material. And the process as claimed can be practiced by another materially different apparatus, on by hand, such as an apparatus which does not require a package cap to protect the electrical connection, the sealed plug is may be use to protect electrical connection.

Because these inventions are distinct for the reason given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

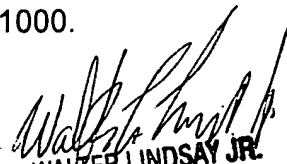

Because these inventions are distinct for the reason give above and the search required for Group I is not for Group II, restriction for examination purposes as indicated is proper.
